Subject: One further change to the QAPP

Hey Rob,

I just spoke with Diane Harris. After discussion with her, I think it's best that we ask Test America to provide level 4 data reports for our splits of soil and sediment samples. Additionally, I think we should add this language to either section A-9 of the QAPP or the appropriate section D associated with data validation.

I understand that this basically requires your data validation to comply with MARLAP as well.

Either way, let's proceed with this change as well and just give me a call if there are any questions or issues.

Thanks,

Tom
